We have a mobile app which is used for taking photos of delivery documents.

This was originally a native android app which used a package called SmartCropper to detect the documents and crop them.

We have now rewritten the app in Flutter so that we can make it available for iOS, but we cannot get a cropping solution that is as good as SmartCropper so far.

I'm thinking about the possibility of us cropping images on the server potentially using a third party or some sort of locally running AI.

Im wondering what the options are

For server-side or AI-based document cropping, you have several options:

1. Third-Party APIs:

- **Google Cloud Vision** or **Amazon Rekognition**: These provide document
